

DVD collection devices

The Dacal 300 is an automated storage unit for regular 12cm optical disks (CDs and DVDs). It can be loaded with up to 150 disks which are then accessed either by keying in the required CD slot number on the built in keypad or alternatively, if it's connected to your PC or Mac you can use the supplied database software to select or search for the required disk which, once found, can be ejected using a simple double-click of the mouse. Alternative software for Dacal 300 is available. Read [full Dacal 300 review by Wayne Brooker](#).
